FIG. 2B

Figure 1 is a log-log plot showing the relationship between Percent Normal Pool Plasma (X-axis, 1 to 10) and Clotting Time Difference (SEC) (Y-axis, 1 to 20). The plot includes data points for various clotting factors (diamonds, squares, circles) and three regression lines (solid, dashed, and dotted). The Y-axis is labeled 'CLOTTING TIME DIFFERENCE (SEC)' and the X-axis is labeled 'PERCENT NORMAL PLASMA'.

FIG. 3

000000 6/2/9999

FIG. 4

The graph is a log-log plot with the following characteristics:

- X-axis:** Labeled "PERCENT NORMAL POOL PLASMA", ranging from 1 to 10.
- Y-axis:** Labeled "CLOTTING TIME DIFFERENCE (SEC)", ranging from 1 to 20.
- Data Series:** Multiple series represented by different symbols: solid diamonds, open diamonds, solid squares, open squares, solid circles, open circles, solid triangles, and open triangles.
- Regression Lines:**
  - A solid line passing through the upper cluster of diamond and square data points.
  - A dashed line passing through the lower cluster of circle and triangle data points.
  - A dash-dot line passing through the middle cluster of diamond and square data points.
- Trend:** All data series show a negative correlation between the variables on the log-log scale.
